

# Payment Funnel analysis

Subscription Payment Funnel Stages

Main Data Model

# In this SQL, I am doing a funnel payment analysis to see the furthest point as well as where users are falling off in the payment process.

**#1. Count the number of subs in each payment funnel stage by incorporating the max status reached and current status per subscription.**

Use the paymentstatuslog and subscriptions table

```
with max_status_reached as(  
Select subscriptionid,  
max(statusid) as Maxstatus  
from paymentstatuslog  
group by  
subscriptionid  
)
```

```
paymentfunnelstages AS (  
  SELECT  
    s.subscriptionid,  
    CASE  
      WHEN maxstatus = 1 THEN 'PaymentWidgetOpened'  
      WHEN maxstatus = 2 THEN 'PaymentEntered'  
      WHEN maxstatus = 3 AND currentstatus = 0 THEN 'User Error with Payment Submission'  
      WHEN maxstatus = 3 AND currentstatus != 0 THEN 'Payment Submitted'  
      WHEN maxstatus = 4 AND currentstatus = 0 THEN 'Payment Processing Error with  
Vendor'  
      WHEN maxstatus = 4 AND currentstatus != 0 THEN 'Payment Success'  
      WHEN maxstatus = 5 THEN 'Complete'  
      WHEN maxstatus IS NULL THEN 'User did not start the payment process'  
    END AS paymentfunnelstage  
  FROM  
    subscriptions s  
  LEFT JOIN  
    max_status_reached m  
    ON s.subscriptionid = m.subscriptionid  
)
```

```
SELECT  
  paymentfunnelstage,  
  COUNT(subscriptionid) AS subscriptions  
FROM  
  paymentfunnelstages  
GROUP BY  
  paymentfunnelstage;
```

**Result:**

PAYMENTFUNNELSTAGE	SUBSCRIPTIONS
Complete	12
Payment Processing Error with Vendor	1
Payment Submitted	1
Payment Success	1
PaymentEntered	2
PaymentWidgetOpened	7
User Error with Payment Submission	1
User did not start payment process	3
